# Joseph Li

Sunnyvale, CA | (734) 934-2168 | lijoseph894@gmail.com | linkedin.com/in/lijoseph894 | github.com/josephl894

## SKILLS

**Languages & Databases:** Go, C, C++, SQL, Python, TypeScript, JavaScript, PostgreSQL, Redis

**Infrastructure:** Linux, Docker, Kubernetes, Git, GitHub Actions, QEMU, AWS Bedrock

**Systems:** Observability, Latency, API Gateways, CI/CD, Regression Testing, Asynchronous Programming, Operating Systems, Virtual Memory

## PROFESSIONAL EXPERIENCE

**Cortex AI** **Menlo Park, CA**

*Software Engineer Intern* *Jun 2026 – Aug 2026*

- Designed and launched an LLM API gateway in **Go**, **PostgreSQL**, and **Redis** for a 2,000-seat enterprise customer, unified OpenAI, Anthropic, and **AWS Bedrock** behind one endpoint and metered $10K in monthly model spend
- Built a pre-release agent evaluation platform with **Langfuse** and **GitHub Actions**, expanding coverage from 5 smoke tests to 159 tasks and catching tool regressions before they reached users
- Established production observability in **Langfuse**, adopted by all 9 engineers, tracked per-session latency, cost, and failures, with alerts routed to the engineer responsible for each failure
- Reduced wasted model spend by stopping runaway agent loops and using an **LLM judge** to flag unnecessary tool calls

**Yoyo Markets Inc.** **New York, NY (Remote)**

*Software Engineer* *Aug 2025 – Dec 2025*

- Led a 3-person team to ship a **Python** and LLM market-generation pipeline, replacing manual research and editorial work, published **50+ markets per week at 5x the hand-curated rate**
- Developed an **asynchronous Python** scraper tracking 150+ high-signal Twitter accounts in real-time, delivering **3x the signal volume** of public trend aggregators
- Implemented a ranking system using pairwise LLM comparisons and Elo ratings to screen 200+ candidate markets per cycle and prioritize candidates for founder review
- Shipped a **Next.js** review dashboard on **Vercel**, used daily by founders to approve and publish markets, reduced **publishing turnaround from 30 minutes to under 5 minutes**

## PROJECTS

**Weenix (A Unix-Like OS Kernel)** **USC**

*C, x86, QEMU* *Aug 2025 – Dec 2025*

- Implemented a round-robin scheduler and kernel mutexes, a virtual file system, and copy-on-write demand paging in **C**

**PostgreSQL Buffer Manager** **USC**

*C, PostgreSQL 16.4* *Jan 2025 – May 2025*

- Implemented a **FIFO** policy in **PostgreSQL 16.4**'s **freelist.c** that returns the next buffer in pool order once its pin count hits zero
- Benchmarked its performance against clock sweep at **1MB, 512KB, and 256KB** shared buffers, where **FIFO fell further behind as the pool shrank**

## EDUCATION

**University of Southern California** **Los Angeles, CA**

*M.S. Computer Science | GPA: 3.6/4.0* *Sep 2024 – May 2026*

Relevant Coursework: Operating Systems, Database Systems, Analysis of Algorithms

**University of Michigan, Ann Arbor** **Ann Arbor, MI**

*B.S.E. Data Science | GPA: 3.7/4.0* *Sep 2020 – May 2024*
