Joseph Li

Software Engineer | AI Infrastructure
Mountain View, CA | (734) 934-2168 | lijoseph894@gmail.com | linkedin.com/in/josephl894 | github.com/josephl894 | TN Status Eligible

EDUCATION

University of Southern California — **Los Angeles, CA**
M.S. Computer Science (Artificial Intelligence) | GPA: 3.50/4.00 — *Sep 2024 – May 2026*
Relevant Coursework: Machine Learning, Natural Language Processing, Analysis of Algorithms, Database Systems

University of Michigan, Ann Arbor — **Ann Arbor, MI**
B.S.E. Data Science | GPA: 3.68/4.00 — *Sep 2020 – May 2024*

PROFESSIONAL EXPERIENCE

Cortex AI — *AI desktop workspace for office professionals* — **Mountain View, CA**
AI Engineer Intern — *Jun 2026 – Aug 2026*

- Designed and launched the LLM API gateway (Go, PostgreSQL, Redis) that serves a 2,000-seat enterprise customer, routing OpenAI, Anthropic, and AWS Bedrock through one endpoint and metering $10K/month in model spend
- Built the agent evaluation platform (Langfuse, GitHub Actions) that tests every agent change before release, growing coverage from 5 smoke tests to 159 tasks and catching regressions such as a broken tool before users hit them
- Launched production observability for the agent (Langfuse) adopted by all 9 engineers, giving the team its first view of per-session cost, latency, and failures, with alerts routed to each failure's owner
- Cut wasted model spend by stopping runaway agent loops and flagging unnecessary tool calls with an LLM judge

Yoyo Markets Inc. — *AI-native prediction markets startup* — **New York, NY (Remote)**
AI Engineer (Part-time) — *Aug 2025 – Dec 2025*

- Led a 3-person team that built and launched the market generation pipeline (Python, LLMs), replacing manual research and editorial work and publishing 50+ markets a week, 5x the hand-curated rate
- Built a custom Twitter scraper (async Python) that tracks 150+ high-signal accounts in real time, tripling signal volume beyond public trend aggregators
- Built the ranking system (pairwise LLM comparisons, Elo) that screens 200+ candidate markets per cycle and sends only the strongest to founder review
- Shipped the review dashboard (Next.js, Vercel) that the founders used daily to approve and publish markets, cutting publishing turnaround from 30 minutes to under 5

RESEARCH AND PROJECTS

Weenix (A Unix-Like OS Kernel) — **USC**
C, x86, QEMU — *Fall 2025*

- Implemented processes, kernel threads, a round-robin scheduler, context switching, and kernel mutexes
- Built the virtual file system layer, including path resolution, per-process file descriptor tables, and the file system calls (open, read, write, mkdir, unlink, dup)
- Built the virtual memory layer, including demand paging, mmap, page-fault handling, and copy-on-write fork

University of Michigan, SOCR Lab — **Ann Arbor, MI**
Privacy-Preserving Clinical Text Obfuscation — *2023 – 2024*

- Built an NLP pipeline that de-identifies clinical text with named entity recognition and differential privacy, which let the lab use 10,000+ patient records in research
- The best of 3 benchmarked variants reached 94% entity-redaction accuracy, with downstream task performance within 3% of the unredacted baseline

TECHNICAL SKILLS

Languages: Python, C++, C, CUDA, TypeScript, JavaScript, SQL
Infrastructure & Web: Kubernetes, Docker, Helm, gRPC, Prometheus, Grafana, FastAPI, React, Linux, Git
ML & Data: PyTorch, TensorFlow, Hugging Face Transformers, vLLM, scikit-learn, NumPy, Pandas
